PROFESSIONAL SUMMARY

Computer Science and Engineering graduate (2026) with six months of internship experience as an AI Engineer Intern at ReveloSoft, contributing to two AI products: Tom & Jerry, a pair of candidate- and employer-side hiring agents, and CreditDoctor, an AI credit-health assistant. Hands-on with the OpenAI API, structured outputs, Azure AI Document Intelligence, prompt and context engineering, PII guardrails and testing for relevance, consistency and hallucinations. Built RAG, multi-agent and LLM applications using Python, FastAPI, LangChain, LangGraph, CrewAI and MCP.

TECHNICAL SKILLS

Programming & Web: Python, SQL, React, Node.js, Express.js, REST APIs

Generative AI & LLMs: OpenAI API, Claude API, Llama 3.2 (Ollama), Prompt Engineering, Context Engineering, Structured Outputs, JSON Output Validation

RAG & Retrieval: LangChain, Embeddings, SentenceTransformers, ChromaDB, Chunking, Semantic Search, Source Attribution

Agentic AI: LangGraph, CrewAI, Model Context Protocol (MCP), Multi-Agent Workflows, Conditional Routing, Tool Integration

Backend & Document AI: FastAPI, Pydantic, Azure AI Document Intelligence, Resume Parsing

AI Evaluation & Safety: Relevance, Consistency & Hallucination Testing, Rubric-Based Scoring, PII Guardrails, LangSmith Tracing

Tools: Git, GitHub, Postman, LangSmith

Problem Solving & Core Skills: Analytical Problem Solving, Debugging, Breaking Down Requirements, Communication, Team Collaboration, Technical Documentation, Quick Learning

INTERNSHIP EXPERIENCE

AI Engineer Intern | ReveloSoft **May 2026 – Oct 2026**

Tom & Jerry — AI Career and Hiring Agents | *tomandjerry.ai*

AI hiring product with two agents: Tom coaches job seekers; Jerry helps companies define roles and screen candidates.

Tech: *OpenAI API, Structured Outputs, Azure AI Document Intelligence, Python*

- Built conversational flows for Tom, the candidate-side agent, which interviews students about education, skills, projects and goals and stores the answers as a structured profile.
- Generated ATS-friendly CVs from candidate profiles using OpenAI structured outputs and prompt templates.
- Parsed uploaded resumes with Azure AI Document Intelligence to pre-fill candidate profiles.
- Implemented AI mock interviews with role-specific questions, adaptive follow-ups and rubric-based feedback on candidate answers.
- Contributed to the Kanban job tracker and job-application workflow that moves candidates through saved, applied and interview stages.
- Developed Jerry, the employer-side agent, which gathers role requirements from HR and runs first-round screening interviews on the company's behalf, producing structured candidate summaries.
- Applied context engineering by assembling candidate profile, job description and conversation history into each prompt; tested agent responses for relevance, consistency and hallucinations.

CreditDoctor — AI Credit-Health Platform | *creditdoctor.in*

Platform for users in India to analyse their own credit bureau reports and get guidance on improving their credit score.

Tech: *LLM APIs, Prompt Templates, JSON Output Validation, PII Guardrails*

- Developed an AI assistant that analyses user-uploaded credit reports and guides users to identify and fix errors.
- Designed prompt templates with JSON output validation to extract accounts, enquiries and discrepancies from credit reports.
- Added PII guardrails to protect the personal and financial data contained in credit reports.
- Tested assistant responses across functional, boundary and hallucination scenarios.

AI PROJECTS

AgentForge AI — Multi-Agent RAG & MCP Platform | *Personal Project*

Tech: *Python, FastAPI, React, LangGraph, CrewAI, Model Context Protocol (MCP)*

- Developed a full-stack platform for document question answering and multi-agent workflows using Python, FastAPI and React.
- Used LangGraph to route requests to document retrieval or MCP tools, and coordinated CrewAI agents with separate research, analysis and review roles.

InterviewForge AI — Local RAG Chatbot & Interview Coach | *Personal Project*

Tech: *Python, FastAPI, React, ChromaDB, Embeddings, Llama 3.2, Ollama*

- Built three learning modes: document question answering, mock interviews and Python study.
- Implemented PDF ingestion, chunking, embeddings and persistent ChromaDB storage; retrieved the top 3 chunks to ground Llama 3.2 answers via Ollama.
- Implemented adaptive 5-question practice sessions with scores from 0 to 10, feedback and hints.

NewsPulse — AI News Briefing Agent | *Personal Project*

Tech: *React, Express.js, FastAPI, LangChain, Claude API, Pydantic, LangSmith*

- Built an app that deduplicates RSS articles, groups related headlines by meaning and generates source-attributed briefings with LangChain and Claude.
- Implemented controlled concurrent Claude API calls, Pydantic validation for structured outputs and optional LangSmith tracing for debugging.

AI Meeting Minutes Generator | *Personal Project*

Tech: *Claude API, FastAPI, Express.js*

- Integrated Claude with FastAPI and Express.js to convert transcripts in 3 formats (TXT, VTT and JSON) into concise meeting notes.

ACADEMIC PROJECTS

- **Plant Disease Detection using Machine Learning:** Built a system that analyses plant leaf images with image processing and machine learning to predict diseases and help farmers take preventive action.
- **Gesture-Controlled Mouse Using AI-Powered Video Analytics:** Built a virtual mouse that uses computer vision and machine learning to control cursor movements and actions through hand gestures, for touch-free, accessible use.

EDUCATION

B.Tech, Computer Science and Engineering | Vel Tech | GPA: 7.0/10 **2026**

Diploma, Mechanical Engineering | S.M.V.M. Polytechnic, Tanuku | 67% **2023**

CERTIFICATIONS

- **Model Context Protocol (MCP)** — Anthropic
- **LangChain and LangGraph** — LangChain Academy
- **Generative AI** — Databricks
